Introduction to Data Science

2190513 Data Science (ICE) (2026/1)

Prof. Peerapon Vateekul, Ph.D.

Department of Computer Engineering,
Faculty of Engineering, Chulalongkorn University

Peerapon.v@chula.ac.th

Prof. Peerapon Vateekul, Ph.D. (Aj.Pop)

- **Professor**, Department of Computer Engineering, Faculty of Engineering, Chulalongkorn University, Thailand
- **Research Interests:** Applying AI techniques (AI/ML/DL/Gen AI) for real-world applications in **healthcare**, hydrometeorology, transportation, energy, and other domains
- **Member**, NVIDIA AI Technology Center (NVAITC) since 2018
- **Member**, Chula AI – AI Industry Impact Team
- **Senior Researcher**, AI Center of Excellence in Digital and AI for Mental Health (AIMET), Faculty of Engineering, Chulalongkorn University
- Head, **DATA MIND** Lab (Data Analytics, Machine Intelligence, and Knowledge Discovery)
- **Collaborations:** Government agencies (e.g., HII & MEA), industry partners (e.g., TG & SCG), and healthcare institutions (e.g., Chulalongkorn Hospital)

Introduction

What is data science? (aka. data analytics)

■ Data

- Facts and statistics collected for reference or analysis

■ Science

- A systematic study through observation and experiment

■ Data Science

- The scientific exploration of data to extract meaning or insight,
- and the construction of software to utilize such insight in a business context.

What is data science? (cont.)

1. Transform data into **valuable insights**
2. Transform data into **data products**
3. Transform data into **interesting stories**

The Billion Prices Project: Using Online Prices for Measurement and Research *

Alberto Cavallo
MIT and NBER

Roberto Rigobon
MIT and NBER

This Version: April 8, 2016

12

Fig. 2. BPP price index. Dashed red lines show the monthly series for the CPI in the United States (A) and Argentina (B), as published by the formal government statistics agencies. Solid black lines show the daily price index series, the “State Street’s PriceStats Series” produced by the BPP, which uses scraped Internet data on thousands of retail items. All indices are normalized to 100 as of July 2008. In the U.S. context, the two series track

each other quite closely, although the BPP index is available in real time and at a more granular level (daily instead of monthly). In the plot for Argentina, the indices diverge considerably, with the BPP index growing at about twice the rate of the official CPI. [Updated version of figure 5 in (18), provided courtesy of Alberto Cavallo and Roberto Rigobon, principal investigators of the BPP]

Google Flu Trend

Ginsberg, Jeremy; Mohebbi, Matthew H.; Patel, Rajan S.; Brammer, Lynnette; Smolinski, Mark S.; Brilliant, Larry (19 February 2009). "Detecting influenza epidemics using search engine query data". *Nature*. **457** (7232): 1012–1014.

What are they using data science for?

1. Measurement
2. Insights
3. Data Products

1) Measurement

15

- To **make a decision** based on data (aka. Benchmarking)
- Turning qualitative information into **quantitative values** (metrics or indicators)
- Support comparison:
 - Between options (e.g., which notebook to buy)
 - Before vs. after (e.g., tuning, upgrades)
 - **A/B Testing**

Source: <https://vwo.com/ab-testing/>

Example: SimCity

1. Remove product banner: SimCity sees 43% more conversions without hero banner image

16

Control

Variation

Source: <https://blog.optimizely.com/2015/06/04/ecommerce-conversion-optimization-case-studies/>

Example: SmartWool

3. Use a well-defined grid layout for your online shopping experience: Uniform product page images increase ARPV 17% for SmartWool

17

Source: <https://blog.optimizely.com/2015/06/04/ecommerce-conversion-optimization-case-studies/>

2) Insights

- **Good understanding of user behavior** can lead to new product development or improvements of the existing products
- **Financial startup** -- Typing with proper capitalization indicates creditworthiness
 - Online loan applicants who complete the application form with the correct case are more dependable debtors
- **Starbucks** use customer purchase information from My Starbucks Mobile Apps to figure out new products

Example: Tracing Traffic

19

GPS Average Speed

20

6:00-10:00

10:00-15:00

15:00-18:00

Bus Drivers' Behaviors

21

Bus A

Bus B

3) Data Products

- An application or system that uses data to provide “**intelligent**” products or services, which create more data that can be further used
- **Machine Learning** plays an important role in building great data products

Example: Amazon Recommendation

- Amazon sells 480M products (485k new products per day)
- Use recommendation systems to bring products to customers
- Analyze data from 300M customers
 - Purchase history
 - Reviews / Ratings
 - Search history
 - Views

AI = Automation

- 1) Rule-based AI
- 2) Machine Learning (ML)

Since an early flush of optimism in the 1950's, smaller subsets of artificial intelligence - first machine learning, then deep learning, a subset of machine learning - have created ever larger disruptions.

<https://mc.ai/machine-learning-basics-artificial-intelligence-machine-learning-and-deep-learning/>

Ultralytics YOLOv8 is a cutting-edge, state-of-the-art (SOTA) model that builds upon the success of previous YOLO versions and introduces new features and improvements to further boost performance and flexibility. YOLOv8 is designed to be fast, accurate, and easy to use, making it an excellent choice for a wide range of object detection and tracking, instance segmentation, image classification and pose estimation tasks.

Models

YOLOv8 [Detect](#), [Segment](#) and [Pose](#) models pretrained on the [COCO](#) dataset are available here, as well as YOLOv8 [Classify](#) models pretrained on the [ImageNet](#) dataset. [Track](#) mode is available for all Detect, Segment and Pose models.

All [Models](#) download automatically from the latest Ultralytics [release](#) on first use.

BigData Ecosystem

✚ We have the data and the ML model.

So, are we all set? Or is there more to consider?

Do you think that user can use this code to get the prediction result? NO!!!

```
2_Linear-Regression-v2.ipynb
File Edit View Insert Runtime Tools Help

+ Code + Text Copy to Drive

[ ] 1 coeff_df = pd.DataFrame(lm.coef_, lm.feature_names_in_, columns=['Coefficient'])
    2 coeff_df

Does this make sense? Probably not because I made up this data. If you want real data to repeat this sort of analysis, check out the boston dataset:

from sklearn.datasets import load_boston
boston = load_boston()
print(boston.DESCR)
boston_df = boston.data

▼ Predictions from our Model

Let's grab predictions off our test set and see how well it did!

[ ] 1 predictions = lm.predict(X_test)

[ ] 1 plt.scatter(y_test, predictions)

Residual Histogram

[ ] 1 sns.distplot((y_test-predictions), bins=50);
```

Interesting facts

50

- More than 50% of AI projects were **FAILED** since they didn't plan about the deployment.
- | For the AI project, finish building the model is only 50% of the work.
- | The remaining work is about the deployment as a touchpoint to the target user.

MLOps = DataML + DevOps

Disclaimer

+ 2190513: Data Science (DS)

Practical Data Analytics & ML Pipeline

■ This course focuses on:

- Fundamental data processing
- ML pipeline
- Practical process (MLOps)

■ Remark1: DS != AI/ML

■ We cannot cover all algorithms (NN, DL, NLP, CV, etc.) in this course!

■ Remark2: DS != DE (aka. DW)

■ There are a lot more DE tasks (NoSQL, ETL, etc.)

Any questions? 😊
